Sungood, the compact & foldable solar cooker for gourmet, fun and ecological picnics!

An innovation "Made in France" awarded at the Lépine competition

For convivial days by the sea or in the heart of nature, with friends or family, what better solution than to be able to prepare a good meal on site to share good times? Thanks to the Sungood solar cooker, it is possible to cook any type of food on the move (rice, fish, meat, etc.) without any smoke or flame. Totally secure, this portable oven accompanies every outdoor outing (beach, mountain, garden) and guarantees perfect cooking!

An ecological cooker oven that can be transported everywhere

At the beach, in the forest or in the garden, with the Sungood solar cooker, you can now cook everywhere! With a compact and light design, each outdoor outing can now be accompanied by a convivial meal.

Sungood deploys in 5 minutes. Simply unfold it (two possible positions), place the container in the center of the flat rest and orient it facing the sun. The sun's rays will reflect off the mirrors of the cooker and focus on the dish.

The heat rises gradually (between 80° and 150°C, depending on the orientation), which allows the food to be cooked gently, while retaining its flavors. Without gas or electricity, you get perfect cooking, and all in an ecological way, with no CO2 emissions!

An ideal complement to the BBQ

Sungood can heat any type of food: fish, meat, vegetables, ratatouille, rice, bread... it is the ideal ally for your barbecue meal! While your grilled meats are simmering on the classic BBQ, you prepare the sides with Sungood. Completely secure, because it avoids the risk of a fire starting, Sungood does not need any supervision, so you can enjoy your aperitif while it cooks.

Cooking for two to four people has never been easier. And to clean it? A wipe with a damp cloth is sufficient for its maintenance. Foldable and very light (950gr), Sungood fits easily in a bag and can be carried everywhere!

Sungood® is now available in three colors (yellow, blue, red) at a price of €79.95 on [the Solar Brother store](#)

Technical characteristics :

- **Weight: 950 g / Package weight: 1.5 kg.**
- **Materials: Polypro, S-Reflect© 200 µ adhesive mirror film, nylon bags (upcycling), foldable metal trivet.**
- **Package dimensions: 38 x 28 x 6 cm**
- **Dimensions of the folded product: 34 x 26 x 3 cm**
- **Dimensions of the assembled product: 90 x 58 x 25 cm**
- **Made under the French sun.**
- **REF: SG.**
- **Warranty: 12 months**

About Solar Brother:

Created by Gilles Gallo and Gatien Brault in 2016, Solar Brother is developing a range of ingenious and "outdoor friendly" objects operating on the basis of concentrated solar energy, captured using a system of parabolic reflector mirrors: a technology as old as Archimedes and that almost everyone has experienced with a magnifying glass as children. Based on this principle, Solar Brother has designed and distributed 4 innovative products to the general public, including 3 Lépine prize-winners. They are present in nearly 300 points of sale - in Europe, with a promising launch in Japan in 2020. Benefiting from the support of the Public Investment Bank, both in innovation and export, Solar Brother wishes today accelerating the development of the brand internationally, particularly in Germany and the United States.

Committed to reducing its environmental impact as much as possible, Solar Brother uses recycled, up-cycled materials and 0-waste packaging and French manufacturing.
